

PolicyWise Cashless Hospital Network Guide

Document Code: PW-NW-2026-01

Synthetic-data notice: This fictional document is for RAG development, testing, demonstrations, and training only. It is not a real insurance contract.

1. Cashless Treatment

Cashless treatment allows approved covered expenses to be settled directly with an eligible network hospital, subject to pre-authorization and policy terms.

2. Planned Admission

For planned treatment, a cashless pre-authorization request should normally reach the administrator at least 48 hours before admission.

3. Emergency Admission

For emergency admission at a network hospital, the cashless request should normally be initiated within 24 hours of admission.

4. Non-network Hospital

Treatment at a non-network hospital generally follows the reimbursement process rather than cashless settlement, unless a specific arrangement applies.

5. Non-payable Items

Cashless approval does not mean every hospital charge is payable. Non-covered consumables, exclusions, deductibles, co-payments, and amounts above policy limits remain the insured's responsibility.

6. Pre-authorization

Pre-authorization is an assessment based on available information and is not an unconditional guarantee of final claim payment.

7. Documents

Hospitals may submit medical notes, estimated bills, diagnosis information, proposed treatment details, and policy identification for cashless authorization.

8. Discharge

Final authorization may be required before discharge. Delays can occur when final bills or medical documents are incomplete.

9. Testing Note

This guide explains cashless mechanics; product-specific benefit limits should still come from the relevant policy document.
