

PolicyWise DriveGuard Add-on Covers - Sample Rider Guide

Document Code: PW-MA-2026-01

Synthetic-data notice: This fictional document is for RAG development, testing, demonstrations, and training only. It is not a real insurance contract.

1. Zero Depreciation

The zero-depreciation add-on reduces depreciation deductions on eligible replaced vehicle parts for admissible own-damage claims, subject to add-on conditions.

2. Engine Protection

Engine-protection cover applies to specified engine damage caused by covered water ingress or lubricating-oil leakage following an insured event, subject to exclusions.

3. Roadside Assistance

Roadside assistance includes towing up to 50 kilometres, battery jump-start, flat-tyre assistance, and emergency fuel delivery support. Cost of replacement fuel itself is not covered.

4. Return to Invoice

For an eligible total loss or theft claim, return-to-invoice cover may increase settlement toward the original invoice-related value according to the add-on wording.

5. Consumables

The consumables add-on covers specified consumable items used during eligible accident repairs when those items would otherwise be excluded.

6. Key Replacement

Replacement of lost or stolen vehicle keys is covered up to INR 25,000 per policy year under the key-replacement add-on.

7. Add-on Dependency

An add-on applies only when shown as purchased in the policy schedule and while the underlying motor policy remains active.

8. Exclusions

Add-ons do not convert routine maintenance, mechanical breakdown, wear and tear, or non-accidental deterioration into covered losses unless expressly stated.

9. Testing Note

Questions about towing distance or key replacement should retrieve this add-on guide rather than the base motor policy.
